## Options

This document provides technical specifications for the E5071C ENA network analyzer and the E5092A multiport test set.

| E5071C-230 | 2-port test set, 9 kHz to 3 GHz without bias tees (Discontinued) |
| :--- | :--- |
| E5071C-235 | 2-port test set, 100 kHz to 3 GHz with bias tees (Discontinued) |
| E5071C-240 | 2-port test set, 9 kHz to 4.5 GHz without bias tees |
| E5071C-245 | 2-port test set, 100 kHz to 4.5 GHz with bias tees |
| E5071C-260 | 2-port test set, 9 kHz to 6.5 GHz without bias tees |
| E5071C-265 | 2-port test set, 100 kHz to 6.5 GHz with bias tees |
| E5071C-280 | 2-port test set, 9 kHz to 8.5 GHz without bias tees |
| E5071C-285 | 2-port test set, 100 kHz to 8.5 GHz with bias tees |
| E5071C-430 | 4-port test set, 9 kHz to 3 GHz without bias tees (Discontinued) |
| E5071C-435 | 4-port test set, 100 kHz to 3 GHz with bias tees (Discontinued) |
| E5071C-440 | 4-port test set, 9 kHz to 4.5 GHz without bias tees |
| E5071C-445 | 4-port test set, 100 kHz to 4.5 GHz with bias tees |
| E5071C-460 | 4-port test set, 9 kHz to 6.5 GHz without bias tees |
| E5071C-465 | 4-port test set, 100 kHz to 6.5 GHz with bias tees |
| E5071C-480 | 4-port test set, 9 kHz to 8.5 GHz without bias tees |
| E5071C-485 | 4-port test set, 100 kHz to 8.5 GHz with bias tees |
| E5071C-2D5 | 2-port test set, 300 kHz to 14 GHz with bias tees |
| E5071C-4D5 | 4-port test set, 300 kHz to 14 GHz with bias tees |
| E5071C-2K5 | 2-port test set, 300 kHz to 20 GHz with bias tees |
| E5071C-4K5 | 4-port test set, 300 kHz to 20 GHz with bias tees |
| E5092A | Configurable multiport test set |

## Calibration kits and ECal modules

This E5071C data sheet also provides technical specifications for the following calibration kits and ECal modules. For models not listed in this data sheet, please download the free Uncertainty Calculator from www.agilent.com/find/na_calculator to generate the curves for your calibration kit.

| 85032F | Calibration kit |
| :--- | :--- |
| 85033E | Calibration kit |
| 85052D | Calibration kit |
| 85092C | Electronic calibration (ECaI) module |
| 85093C | Electronic calibration (ECal) module |
| N4691B | Electronic calibration (ECal) module |

## Definitions

## Specification (spec.):

Warranted performance. All specifications apply at $23^{\circ} \mathrm{C}\left( \pm 5^{\circ} \mathrm{C}\right)$, unless otherwise stated, and 90 minutes after the instrument has been turned on. Specifications include guard bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Supplemental information is intended to provide information that is helpful for using the instrument but that is not guaranteed by the product warranty.

Typical (typ.):
Describes performance that will be met by a minimum of $80 \%$ of all products. It is not guaranteed by the product warranty.

## Supplemental performance data (SPD):

Supplemental performance data represents the value of a parameter that is most likely to occur; the expected mean or average. It is not guaranteed by the product warranty.

## General characteristics:

A general, descriptive term that does not imply a level of performance.
Note: The specifications in this data sheet also apply to the E5071CEP ENA network analyzer express configuration. For more information about the Express ENA, visit www.agilent.com/find/express-e5071c

## Boundary Conditions

In this data sheet, boundary conditions are given for the specifications. For example, system dynamic range is 98 dB with the following boundary conditions.

Option: 485
Frequency: 10 MHz
IF bandwidth: 3 kHz
If the same boundary conditions fall under more than one category in a table, apply the best value.

## Corrected System Performance

The specifications in this section apply to measurements made with the Agilent E5071C network analyzer under the following conditions:

- No averaging applied to data
- Environmental temperature of $23^{\circ} \mathrm{C}\left( \pm 5^{\circ} \mathrm{C}\right)$ with less than $1^{\circ} \mathrm{C}$ deviation from the calibration temperature
- Response and isolation calibration performed
- RF Range Fixed Mode: OFF

## System dynamic range

Table 1. Option 230/235/240/245/260/265/280/285/430/435/440/445/
460/465/480/485

| Description | Specification | SPD |  |
| :--- | :--- | :--- | :--- |
| System dynamic range1, 2, 3 |  |  |  |
| 9 kHz to 300 kHz |  | 72 dB |  |
| 300 kHz to 10 MHz | IF bandwidth $=3 \mathrm{kHz}$ | 82 dB |  |
| 10 MHz to 6 GHz |  | 98 dB |  |
| 6 GHz to 8.5 GHz |  | 92 dB |  |
| 9 kHz to 300 kHz |  | 97 dB | 115 dB |
| 300 kHz to 10 MHz |  | 107 dB | 115 dB |
| 10 MHz to 6 GHz | IF bandwidth $=10 \mathrm{~Hz}$ | 123 dB | 130 dB |
| 6 GHz to 7 GHz |  | 117 dB | 128 dB |
| 7 GHz to 8 GHz |  | 117 dB | 126 dB |
| 8 GHz to 8.5 GHz |  | 117 dB | 124 dB |

Figure 1. System dynamic range (specification and actual measurement data example, IF bandwidth 10 Hz )

1. The test port dynamic range is calculated as the difference between the test port rms noise floor and the source maximum output power. The effective dynamic range must take measurement uncertainty and interfering signals into account.
2. The specification might not be met at 5 MHz or 50 MHz .
3. System Dynamic Range may be degraded by 10 dB when RF Range Fixed Mode is ON .

## System dynamic range (continued)

1. Source output performance on port 1 only. Other port output performance is typical.
2. Level accuracy is taken at 0 dBm , relative to 50 MHz reference unless otherwise stated.
3. Level linearity given is relative to 0 dBm .
4. The specification might not be met at 5 MHz or 50 MHz .
5. The level accuracy specification needs to be taken into account for test port output power level.
6. Power calibration using an external power meter improves level accuracy of the test port output power. Proper power meters/sensors, and the 82357B USB-GPIB interface are required to conduct power calibration.

## Test port output power (continued)

Table 13. Option 2D5/2K5/4D5/4K5

| Description | Specification | Typical |
| :--- | :--- | :--- |

## Test port input (dynamic accuracy) ${ }^{1,2}$

Table 24. Option 230/235/240/245/260/265/280/285/430/435/440/ 445/460/465/480/485

Accuracy of the test port input power reading is relative to -10 dBm reference input power level.

| Description | Specification | Typical |
| :--- | :--- | :--- |
| Dynamic accuracy magnitude |  |  |
| 10 dBm | $\pm 0.207 \mathrm{~dB}$ |  |
| -30 dBm | $\pm 0.045 \mathrm{~dB}$ |  |
| -100 dBm | $\pm 2.00 \mathrm{~dB}$ | $\pm 3.0 \mathrm{~dB}$ |
| -110 dBm |  |  |
| Dynamic accuracy phase |  |  |
| 10 dBm | $\pm 5.03 \mathrm{deg}$ |  |
| -30 dBm | $\pm 0.30 \mathrm{deg}$ |  |
| -100 dBm | $\pm 15.0 \mathrm{deg}$ |  |

## Specification

$\pm 3.0 \mathrm{~dB}$ (at -110 dBm , Ref. $=-10 \mathrm{dBm}$, typical)

[^8]
## Test port input (dynamic accuracy) ${ }^{1}$ (continued)

Table 25. Option 2D5/2K5/4D5/4K5
Accuracy of the test port input power reading is relative to -10 dBm reference input power level.

| Description | Specification | Typical |
| :--- | :--- | :--- |
| Dynamic accuracy magnitude |  |  |
| 10 dBm | $\pm 2.49 \mathrm{~dB}$ |  |
| -30 dBm | $\pm 0.046 \mathrm{~dB}$ |  |
| -100 dBm | $\pm 2.00 \mathrm{~dB}$ | $\pm 3.0 \mathrm{~dB}$ |
| -110 dBm |  |  |

Dynamic accuracy phase

| 10 dBm | $\pm 20.6 \mathrm{deg}$ |
| :--- | :--- |
| -30 dBm | $\pm 0.30 \mathrm{deg}$ |
| -100 dBm | $\pm 15.0 \mathrm{deg}$ |

## Specification

$\pm 3.0 \mathrm{~dB}$ (at -110 dBm , Ref. $=-10 \mathrm{dBm}$, typical)

[^9]
## Test port input (group delay) ${ }^{1}$

Table 26. Option 230/235/240/245/260/265/280/285/430/435/440/ 445/460/465/480/485

| Description | Specification | Supplemental information |
| :--- | :--- | :--- |
| Aperture (selectable) | (frequency span)/(number <br> of points -1$)$ |  |
| Maximum aperture | $25 \%$ of frequency span |  |
| Minimum delay |  | Limited to measuring no more <br> than $180^{\circ}$ of phase change <br> within the minimum aperture. |
| Accuracy |  | See graph below, typical |

The following graph shows group delay accuracy with type- N connectors, full 2-port calibration and a 10 Hz IF bandwidth, RF Range Fixed Mode: OFF

Calibration kit (85032F). Insertion loss is assumed to be $<2 \mathrm{~dB}$.

In general, the following formula can be used to determine the accuracy, in seconds, of a specific group delay measurement:
$\pm$ phase accuracy (degrees) / [360 x aperture (Hz)]

1. Group delay is computed by measuring the phase change within a specified step (determined by the frequency span and the number of points per sweep).

## Test port input (group delay) ${ }^{1}$ (continued)

Table 27. Option 2D5/2K5/4D5/4K5

| Description | Specification | Supplemental information |
| :--- | :--- | :--- |
| Aperture (selectable) | (frequency span)/(number <br> of points - 1) |  |
| Maximum aperture | 25\% of frequency span |  |
| Minimum delay |  | Limited to measuring no more <br> than 180 of phase change <br> within the minimum aperture. |
| Accuracy | See graph below, typical |  |

The following graph shows group delay accuracy with 3.5 mm (male) connectors, full 2-port calibration and a 10 Hz IF bandwidth.

Calibration kit (85052D). Insertion loss is assumed to be $<2 \mathrm{~dB}$.

In general, the following formula can be used to determine the accuracy, in seconds, of a specific group delay measurement:
$\pm$ phase accuracy (degrees) / [360 x aperture (Hz)]

[^10] (determined by the frequency span and the number of points per sweep).

## General Information

Table 28. System bandwidth

| Description | General characteristics |
| :--- | :--- |
| IF bandwidth settings |  |
| Range | 10 Hz to 1.5 MHz |
|  | Nominal settings are: |
|  | $10,15,20,30,40,50,70,100,150,200,300,400,500,700,1 \mathrm{k}$, |
|  | $1.5 \mathrm{k}, 2 \mathrm{k}, 3 \mathrm{k}, 4 \mathrm{k}, 5 \mathrm{k}, 7 \mathrm{k}, 10 \mathrm{k}, 15 \mathrm{k}, 20 \mathrm{k}, 30 \mathrm{k}, 40 \mathrm{k}, 50 \mathrm{k}, 70 \mathrm{k}$, |
|  | $100 \mathrm{k}, 150 \mathrm{k}, 200 \mathrm{k}, 300 \mathrm{k}, 400 \mathrm{k}, 500 \mathrm{kHz}, 700 \mathrm{kHz}, 1 \mathrm{MHz}$, |
|  | 1.5 MHz |

Table 29. Front panel information

| Description | Typical | General characteristics |
| :---: | :---: | :---: |
| RF connectors |  |  |
| Option 230/235/240/ |  | Type-N, female, $50 \Omega$ |
| 245/260/265/280/285/ |  |  |
| 430/435/440/445/460/ |  |  |
| 465/480/485 |  |  |
| Option 2D5/2K5/4D5/4K5 |  | 3.5 mm (male), $50 \Omega$ nominal |
| Probe power |  |  |
| Connector |  | 3 terminal connector $\times 2$ |
| Voltage \& maximum current | +15 V $\pm 2 \%$ ( 400 mA ) |  |
|  | $-12.6 \mathrm{~V} \pm 5 \%$ ( 300 mA ) |  |
|  | (Combined load for both probe connections) |  |
| Display |  |  |
| Type |  | 10.4 in TFT color LCD with touch screen |
| Resolution |  | XGA (1024 x 768) ${ }^{1}$ |

1. Valid pixels are $99.99 \%$ and more. Below $0.01 \%$ (approx. 30 points) of fixed points of black, blue, green or red are not regarded as failure.

Table 30. Rear panel information

| Description | Typical | General characteristics |
| :---: | :---: | :---: |
| External trigger input connector |  |  |
| Type |  | BNC, female |
| Input level |  | Low threshold voltage: 0.5 V |
|  |  | High threshold voltage: 2.1 V |
|  |  | Input level range: 0 to +5 V |
| Pulse width |  | $\geq 2 \mu \mathrm{sec}$ |
| Polarity |  | Positive or negative |
| External trigger output connector |  |  |
| Type |  | BNC, female |
| Maximum output current |  | 50 mA |
| Output level |  | Low level voltage: 0 V |
|  |  | High level voltage: 5 V |
| Pulse width |  | $1 \mu \mathrm{sec}$ |
| Polarity |  | Positive or negative |
| External reference signal input connector |  |  |
| Type |  | BNC, female |
| Input frequency | $10 \mathrm{MHz} \pm 10 \mathrm{ppm}$ |  |
| Input level | -3 to +10 dBm |  |
| Internal reference signal output connector |  |  |
| Type |  | BNC, female |
| Output frequency | $10 \mathrm{MHz} \pm 7 \mathrm{ppm}$ |  |
| Signal type | Sinewave |  |
| Output level | $0 \mathrm{dBm} \pm 3 \mathrm{~dB}$ into $50 \Omega$ |  |
| Output impedance |  | $50 \Omega$ |
| Internal reference signal oven connector |  |  |
| Type |  | BNC, female |
| Output frequency | $10 \mathrm{MHz} \pm 1 \mathrm{ppm}$ |  |
| Output level | 0 dBm minimum |  |

Table 31. Rear panel information (continued)

Table 32. Rear panel information (continued)

| Description Typical | General characteristics |
| :---: | :---: |
| Line power ${ }^{2}$ |  |
| Frequency | 47 Hz to 63 Hz |
| Voltage | 90-264 VAC (Vpeak > 120 V ) |
| VA max | 350 VA max. |
| Power Consumption |  |
| Option 230/235/240/245/260/265/280/285 | 130 W (SPD) |
| Option 430/435/440/445/460/465/480/485 | 155 W (SPD) |
| Option 2D5/2K5 | 160 W (SPD) |
| Option 4D5/4K5 | 185 W (SPD) |
| Description Specification | General characteristics |
| AUX input connector |  |
| Type | BNC, female $\times 2$ |
| Input range | $\pm 1 \mathrm{~V}$ or $\pm 10 \mathrm{~V}$ selectable |
| Accuracy $1 \%+1 \mathrm{mV}$ for $\pm 1 \mathrm{~V}$ input <br>  $1 \%+10 \mathrm{mV}$ for $\pm 10 \mathrm{~V}$ input |  |

## Agilent Technologies

[^0]:    1. The test port dynamic range is calculated as the difference between the test port's rms noise floor and the source's maximum output power. Effective dynamic range must take measurement uncertainty and interfering signals into account.
    2. The specification might not be met at 5 MHz or 50 MHz .
[^1]:    1. The specification might not be met when Shift LO Mode is ON.
    2. Load match may be degraded by 3 dB when RF Range Fixed Mode is ON .
    3. Transmission tracking may be degraded by $\pm 4 \mathrm{~dB}$ when RF Range Fixed Mode is ON
[^2]:    1. Level accuracy is taken at -5 dBm , relative to 50 MHz reference unless otherwise stated.
[^3]:    1. This includes 6th and 7th harmonics when the test frequency is from 1 MHz to 1 GHz .
    2. The carrier $\pm^{1} / 8$ th spurious is excluded from 8.76 GHz to 17.52 GHz .
    3. The level accuracy specification needs to be taken into account for test port output power level.
    4. Power calibration using an external power meter improves level accuracy of the test port output power. Proper power meters/sensors, and the 82357B USB-GPIB interface are required to conduct power calibration.
    5. Maximum output power is the maximum power of "Range" in Table 13 Test port output power.
    6. Source output performance on port 1 only. Other port output performance is typical.
[^4]:    1. The specification might not be met at 5 MHz or 50 MHz .
[^5]:    1. The specification might not be met at the following frequencies: $333.333 \mathrm{kHz}, 406.25 \mathrm{kHz}$, $857.143 \mathrm{kHz}, 928.571 \mathrm{kHz}, 1.3 \mathrm{MHz}, 2.4 \mathrm{MHz}$ and 4.333333 MHz .
    2. The specification might not be met at 5 MHz or 50 MHz .
    3. When RF Range Fixed Mode is ON, multiply by 2.3.
[^6]:    1. The specification might not be met at the following frequencies: $406.25 \mathrm{kHz}, 666.667 \mathrm{kHz}$, $722.222 \mathrm{kHz}, 857.143 \mathrm{kHz}, 928.571 \mathrm{kHz}, 1.444444 \mathrm{MHz}, 1.714286 \mathrm{MHz}, 1.8 \mathrm{MHz}, 1.857143 \mathrm{MHz}$, 1.95 MHz, 2.4375 MHz, 2.571429 MHz, $3.714286 \mathrm{MHz}, 4.8 \mathrm{MHz}, 5 \mathrm{MHz}, 5.416667 \mathrm{MHz}$, $7.583333 \mathrm{MHz}, 10 \mathrm{MHz}, 10.833333 \mathrm{MHz}, 12.5 \mathrm{MHz}$.
    2. The specification might not be met at 5 MHz or 50 MHz .
    3. Trace noise SPD is defined with transmission measurements only.
[^7]:    1. Stability is defined as a ratio measurement at the test port.
[^8]:    1. Dynamic accuracy is verified with the following measurements:

    - compression over frequency
    - IF linearity at two frequencies ( 1 MHz and 1.195 GHz ) using a reference level of -10 dBm for an input power range of 0 to -100 dBm . For value below -60 dBm , refer to "VNA Receiver Dynamic Accuracy Specifications and Uncertainties N5247-90003" http://cp.literature.agilent.com/litweb/pdf/N5247-90003.pdf

    2. RF Range Fixed Mode is OFF
[^9]:    1. Dynamic accuracy is verified with the following measurements:

    - compression over frequency
    - IF linearity at two frequencies ( 1 MHz and 1.195 GHz ) using a reference level of -10 dBm for an input power range of 0 to -60 dBm . For value below -60 dBm , refer to "VNA Receiver Dynamic Accuracy Specifications and Uncertainties N5247-90003" http://cp.literature.agilent.com/litweb/pdf/N5247-90003.pdf.

[^10]:    1. Group delay is computed by measuring the phase change within a specified step
[^11]:    1. USB Test and Measurement Class (TMC) interface that communicates over USB, complying with the IEEE 488.1 and IEEE 488.2 standards.
    2. A third-wire ground is required.
[^12]:    1. Supplemental performance data.
    2. Measured with firmware version B. 12.03 with serial number prefix MY465.
[^13]:    1. Supplemental performance data. Data transfer time varies depending on the type of PC and control software.
    2. Measured with firmware version B. 12.03 with serial number prefix MY465.
    3. Transferred complex $\mathrm{S}_{11}$ data, using :CALC\{1-36\}:DATA:FDAT?.
    4. Measured using an E5071C VBA macro running inside the analyzer. Transferred complex $\mathrm{S}_{11}$ data
[^14]:    1. SPDT: Single-pole-double-throw switches. Applies to SW5, SW6, SW7, SW8, SW9 and SW10 in the E5092A. (See Figure 20.)
    2. SP4T: Single-pole-four-throw switches. Applies to SW1, SW2, SW3 and SW4 in the E5092A. (See Figure 20.)
[^15]:    1. SPDT: Single-pole-double-throw switches. Applies to SW5, SW6, SW7, SW8, SW9 and SW10 in the E5092A. (See Figure 20.)
    2. SP4T: Single-pole-four-throw switches. Applies to SW1, SW2, SW3 and SW4 in the E5092A. (See Figure 20.)
    3. This specification is defined when all ports are terminated with a 50 ohm load.
[^16]:    1. 1 A third-wire ground is required.
